Report for Assignment # 3
CS 5500
March 3, 2014
Parker Michaelson

The status of the assignment is as follows

- Facilities exist for reading and writing ppm files to and from a histogram format.

- Facilities exist for evaluating the fitness of possible solutions relative to the master solution, which is represented as as histogram.

- Primitives for the genetic algorithm exist and are functional.

The major flaw in the assignment is currently an error preventing a final evaluation of the function due to a NULL pointer error, preventing output of the best solution as an image.
